Python and Data Analytics Intern

PROFILE

B.Tech Data Science student at Loyola Institute of Technology and Management building practical solutions with Python, SQL, data warehousing, and business analytics. Skilled in data cleaning, transformation, visualization, analytical SQL, backend fundamentals, and AI integration, with hands-on projects spanning data engineering, reporting, and pure-Python data profiling.

TECHNICAL SKILLS

- **Programming & Data:** Python, SQL, T-SQL, SQL Server, REST APIs, data cleaning, data transformation, exploratory data analysis
- **Analytics & BI:** Microsoft Excel, Power Query, PivotTables, Power BI, DAX, data visualization, business analytics, KPI reporting, time intelligence
- **Backend & AI:** Pydantic, asynchronous programming, LLM APIs, SDKs, prompt engineering, context engineering
- **Tools:** Docker, Git, GitHub, SQL Server Management Studio (SSMS)

EDUCATION

Loyola Institute of Technology and Management
B.Tech Data Science

India
2023 — 2027

PROJECTS

SQL Data Warehouse Project

- Built a SQL Server data warehouse using Medallion Architecture, ingesting ERP and CRM CSV data through Bronze, Silver, and Gold layers.
- Implemented ETL workflows for data cleansing, standardization, and normalization; modeled business-ready fact and dimension tables with a star schema for reporting.
- Created SQL-based reporting for customer behavior, product performance, and sales trends, supported by data-flow, architecture, and data-catalog documentation.

SQL Data Analytics Project

- Developed a T-SQL analytics workflow from database setup and CSV ingestion through exploratory analysis and reusable customer and product KPI report views.
- Applied ranking, change-over-time, cumulative, performance, segmentation, and part-to-whole analysis patterns to convert raw sales data into business-ready insights.

DataSleuth

- Developed a pure-Python data profiling utility with reusable reader and utility modules for inspecting datasets and supporting data-quality analysis.
- Organized the project into maintainable Python modules with dependency configuration to support repeatable profiling workflows.

CERTIFICATIONS

- **Agentic AI and Generative AI Fundamentals** — Databricks
- **Python Essentials** — Cisco Networking Academy
- **Microsoft Power BI Data Analyst** — Coursera
